**Clio Release Feb 15th!**

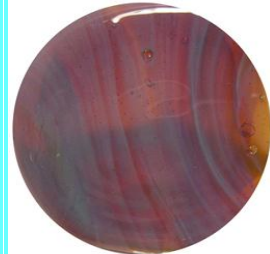

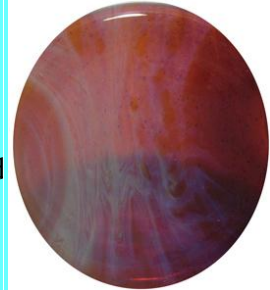

9 am Pacific Time

Clio, based on test batches CL-360 and CL-361, will be released Monday, February 15th at 9 am Pacific Time. Clio is our first color-shifting, reducing and striking glass. The colors will shift in different light sources. Once struck or reduced that color shift is altered. Thus, many color outcomes are possible with this unique color chemistry. You can find her on our website, for \$25 a quarter pound, and through many of our resellers.

**What does the future hold?**

Jed is never satisfied with the status quo. He is always searching for a better way and a new experiment. When he develops a new color he can't help applying what he's learned to an old color. He has reformulated Luna. Luna 3 has less brown and more pinks, purples and blues. Luna2.1 is still available on our website and will be until the current stock runs out. If you want to know what his latest experiment is, be one of the first 25 customers to order Clio through our website and we'll send you a small sample.
